

map()

filter()

forEach()

map()

- return a new array of elements, indices, or arrays.
- by invoking a cb function on them and returning the result.
- does not change (mutate) the original array.
- iterate on the whole array.
- chainable.

filter()

- return a new array of elements.
- by invoking a cb function on them and returning elements that pass the test.
- does not change (mutate) the original array.
- iterate on the whole array
- chainable.

forEach()

- return undefined.
- invoke a cb function on each element of the array.
- does not change (mutate) the original array.
- iterate on the whole array.
- not chainable.
