find()

findIndex()

find()

findIndex()

find()

- searches for the first element pass a test (by a callback function).

- returns the **_first element_** pass the test.

- returns **_undefined_** if no element pass the test or empty array.

- does not change (mutate) the original array.

- stops iterating when an element pass the test.

findIndex()

- searches for the first element pass a test (by a callback function).

- returns the **_index_** of the first element pass the test.

- returns **_false_** with empty array.

- does not change (mutate) the original array.

- stops iterating when an element pass the test.
